Name : Kalariya Kesha

Std : MCA Sem-3

Sub : CSFS

Enrollment No : 24MCA30038

Step 1: Download and Install OpenStego

1. Visit the OpenStego website and download the software for your operating system (Windows, Mac, or Linux).

2. Install the application by following the installation instructions for your platform.

Step 2: Hide Data (Embed Data)

1. **Launch OpenStego**: Open the application after installation.

2. **Choose Cover File**:

    - Click the "Browse" button under the **Cover File** section.

    - Select the image or file that you want to use as the cover. This will be the file into which your secret data is embedded.

3. **Select Secret File**:

    - Click the "Browse" button under the **Secret File** section.

    - Select the file you want to hide (this could be a text file, document, or any other type of file).

4. **Set Password (Optional)**:

- If you want to secure your hidden data with a password, enter a password in the **Password** field.

- This password will be required later to extract the data.

5. **Choose Output File**:

    - Under **Output File**, select the location where the file with the hidden data will be saved.

    - Provide a name for the output file (it can have the same name as the original cover file, but it will have hidden data).

6. **Embed the Data**:

    - Click the "Hide Data" button to begin embedding the secret file into the cover image.

    - OpenStego will process the cover image and embed your secret data into it.

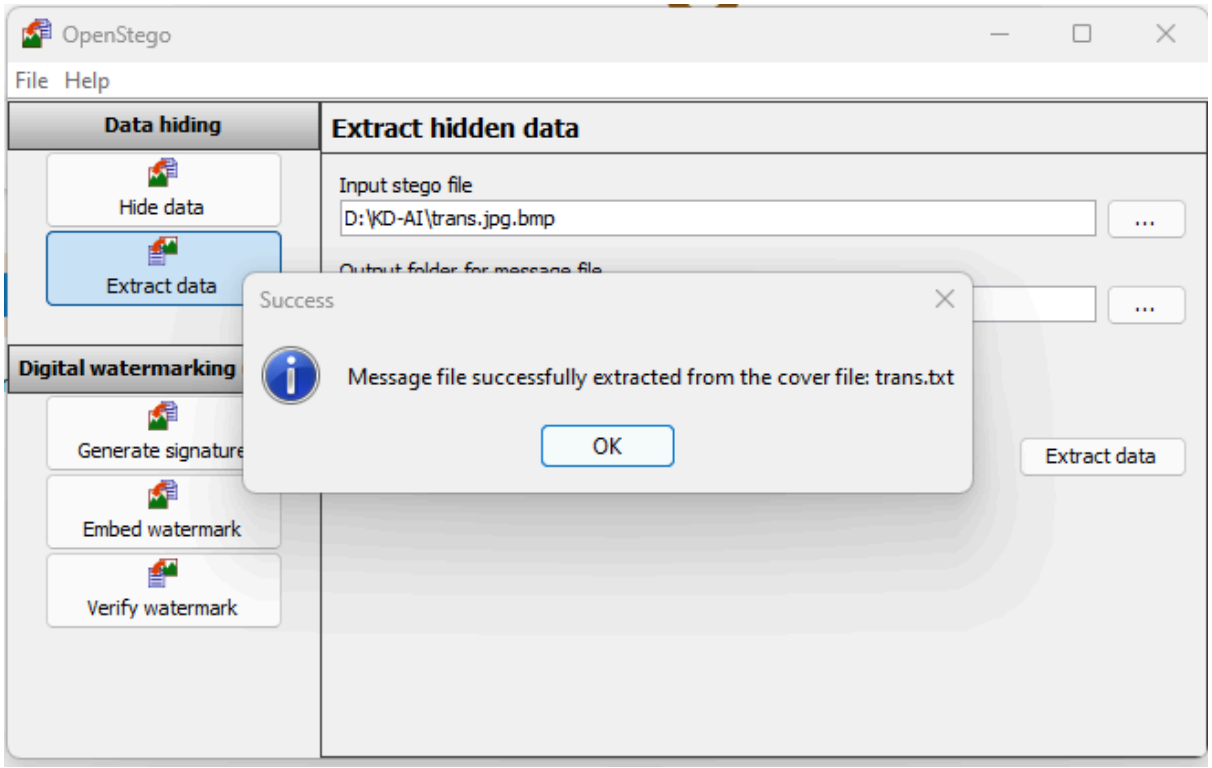

7. **Save the Output**: Once the embedding is complete, your new file with hidden data is saved in the location you specified.

Step 3: Extract Data (Retrieve Hidden Data)

1. **Launch OpenStego**: If the application is not already open, launch it.
2. **Choose the Stego File**:
    - Click the "Browse" button under the **Stego File** section.
    - Select the image or file that contains the hidden data (the one you created in Step 2).
3. **Enter Password (If Applied)**:
    - If you used a password to secure the hidden data, enter the same password in the **Password** field.
4. **Choose Output Directory**:
    - Choose the directory where you want to save the extracted file.
5. **Extract the Data**:
    - Click the "Extract Data" button to begin extracting the hidden file.
6. **Access the Extracted File**:
    - Once the extraction is complete, the hidden file will be saved in the specified output directory.
